Burndown Explanation

This was created using Jira's automatic reports system

Burndown Analysis

As can be seen during the first sprint, we had added many tasks midway, and in the end we were blocked on most of them due to not having Circle CI access permission, Nicholas should be consulted on that for a further explanation if required. We did manage to complete a few tasks at the end however but work will have to be ramped up if we wish to finish this by the last milestone with our delays
